Noida, India

SUMMARY

Senior Software Engineer with 9+ years building distributed systems and cloud-native infrastructure across Azure, AWS, and GCP. Deep expertise in Apache Kafka, Kubernetes, and infrastructure-as-code, with a track record of shipping platforms that cut migration and provisioning times from days to hours. Currently driving multicloud Kubernetes provisioning and secure malware-analysis infrastructure within Microsoft's Security organization, and applying agentic AI tooling to accelerate design, delivery, and code review.

TECHNICAL SKILLS

Languages: Python, Java, Shell, JavaScript, TypeScript

Cloud & Containers: Azure (AKS), AWS, GCP, Kubernetes, Docker, Helm, Terraform, PCF

AI & Automation: GitHub Copilot, Copilot CLI, LLM-assisted system design & code review, agentic AI workflows, end-to-end delivery automation

Messaging & Streaming: Apache Kafka, Kafka Connect, Kafka Streams

Frameworks: FastAPI, Spring Boot, Flask, Angular, AWS Lambda, API Gateway

Databases: PostgreSQL, Oracle

Practices: Distributed Systems, Multicloud, IaC, CDC, CI/CD, Microservices, DR/Failover, Vulnerability Management

EXPERIENCE

Microsoft

Noida, India

Senior Software Engineer

Jan 2025 – Present

- Drive infrastructure for malware analysis and remediation within the Security org, designing ephemeral, fully-isolated sandboxes across dedicated Azure tenants (detached from Microsoft's corporate environment) to safely contain live threats.
- Consolidated fragmented research environments into a single self-service lab platform – researchers compose only the tooling they need while the team owns the full lifecycle (provisioning, vulnerability management, continuous patching) – bringing uniformity, accountability, and faster delivery.
- Lead the multicloud effort extending a proven Azure-native (AKS) Kubernetes provisioning service to additional providers (GCP, AWS), carrying over successful design principles while adopting each provider's native patterns so workloads run on whichever cloud best fits them.
- Freed internal compute capacity for revenue-generating and external-customer workloads by routing usage to best-fit clouds, driving measurable infrastructure cost efficiency.
- Built end-to-end automation across design, delivery, and review workflows, accelerated by agentic AI tooling (GitHub Copilot / Copilot CLI over Microsoft's internal model catalog), compressing delivery cycles from months to days.

JP Morgan Chase

Bengaluru, India

Lead Software Engineer (VP)

Jan 2024 – Dec 2024

- Played a major role in facilitating the Sybase exit for legacy applications by building robust pipelines for Debezium CDC connectors.
- Enabled data movement to AWS PostgreSQL via JDBC connectors by creating custom config providers supporting JPMC-specific authentication mechanisms.

JP Morgan Chase

Bengaluru, India

Software Engineer III

Jan 2022 – Dec 2023

- Increased AWS MSK adoption by 30% across the firm by creating a fully managed replication service for migrating data from on-prem clusters to MSK.
- Reduced datacenter cluster migration time from 15 days to 1 hour via a fully automated namespace migration pipeline.

JP Morgan Chase
Software Engineer II

Bengaluru, India
Jan 2021 – Dec 2021

- Reduced time and resource utilization for data-source migration by 80% by building a Kafka Connect control plane supporting 30+ source and sink connectors.
- Built an orchestrator micro-service for building, patching, and maintenance of Kafka clusters, cutting build-and-patch time from 2 days to 2 hours.

JP Morgan Chase
Associate

Bengaluru, India
Jul 2017 – Dec 2020

- Created a monitoring framework running canary health checks on Apache Kafka clusters, generating a real-time cluster health index now used by 12,000+ applications for failover to DR clusters.
- Built a pipeline for automatic certificate renewal of Kafka cluster hosts, cutting manual cert creation/renewal from 1 day to 5 minutes; 1,500+ certs on Linux hosts are renewed through it.

EDUCATION

Vellore Institute of Technology (VIT), Vellore
B.Tech, Computer Science — GPA 8.66/10.0

Jun 2017

CERTIFICATIONS

- HashiCorp Certified: Terraform Associate (Dec 2022)
- Certified Kubernetes Application Developer – CKAD (Nov 2022)
- AWS Certified Cloud Practitioner (Aug 2022)

AWARDS

- APAC CEO Award, JP Morgan Chase (Aug 2023)
- Reward of Excellence, JP Morgan Chase (Jul 2020)
- Winner, SEP Hackathon (Jul 2018)
