EXPERIENCE

Microsoft IDC

Jan 2025 – Present

Senior Software Engineer

Noida, India

- Built self-service provisioning for secured, ephemeral, tenant-isolated sandboxes used by security researchers for malware analysis and security research; reduced environment setup from several hours to **under 30 minutes**.
- Strengthened research-platform isolation by building sandbox lifecycle management, access boundaries and workload separation, keeping research environments isolated from Microsoft dev and prod tenants.
- Remediated **30+ S360** security and compliance findings across infrastructure, dependencies, configuration and deployment pipelines.
- Reduced manual infrastructure delivery effort by **50%** by standardizing automation using Terraform, Bicep, ARM JSON, Python, Shell and C#.
- Standardized secured multicloud Kubernetes cluster delivery by building reusable templates for node-pool segmentation, network topology, workload-identity (WIF) pool separation and pre-built observability components (metrics, logs); delivered the first production cluster for a customer and made further cluster creation repeatable.
- Baked observability into the cluster template — dashboards, alerts and health checks — to support reliability and availability targets for customer workloads.
- Leveraged Generative AI and agentic AI to accelerate platform engineering tasks such as code generation, IaC review, test scaffolding and runbook automation; reduced implementation time for repeatable work by **45%**.
- Built AI-assisted security triage and validation loops for S360 remediation and infra changes, moving fixes from investigation to reviewed changes **2–3x faster**.

JP Morgan Chase

Jan 2024 – Dec 2024

Lead Software Engineer

Bangalore, India

- Played a major role in facilitating Sybase exit for legacy applications by creating robust pipelines for Debezium CDC connectors.
- Facilitated data movement to AWS PostgreSQL using JDBC connectors by creating custom config providers to support JPMC-specific authentication mechanisms.

JP Morgan Chase

Jan 2022 – Dec 2023

Software Engineer III

Bangalore, India

- Increased adoption of AWS MSK by **30%** in firm by creating fully managed replication service for migrating data from on-prem clusters to MSK.
- Reduced time taken to migrate to new datacenter clusters from **15 days to 1 hour** by creating fully automated namespace migration pipeline.
- Coordinated with other engineers to evaluate and improve software and hardware interfaces.
- Reviewed project specifications and designed technology solutions that met or exceeded performance expectations.
- Worked with software development and testing team members to design and develop robust solutions to meet client requirements for functionality, scalability, and performance.

JP Morgan Chase

Jan 2021 – Dec 2021

Software Engineer II

Bangalore, India

- Reduced time and resource utilization for data source migration by **80%** by creating Kafka Connect Control Plane supporting 30+ source and sink connectors.
- Created orchestrator micro-service for building, patching and maintenance of Kafka clusters; brought down time taken to build and patch Kafka cluster from **2 days to 2 hours**.
- Developed robust, scalable, modular and API-centric infrastructures.
- Promoted experience with Kubernetes, Docker and Amazon Web Services.

- Represented software applications engineering team during large and complex development projects.
- Collaborated with clients to define solution requirements.
- Informed internal personnel and external stakeholders of project milestones.

JP Morgan Chase

Jul 2017 – Dec 2020

Associate

Bangalore, India

- Created monitoring framework to do canary health checks on Apache Kafka clusters which generates a real-time cluster health index — currently used by over **12,000 applications** using Kafka for failover to DR cluster.
- Created pipeline for automatic certificate renewal of hosts owned for Kafka clusters; significantly reduced manual time to create and renew certs from **1 day to 5 minutes**; currently over **1,500 certs** for Linux hosts get renewed through this.
- Conducted product demonstrations to highlight features and redirect objections to positive aspects.

EDUCATION

VIT University

Jul 2013 – Jun 2017

B.Tech in Computer Science

Vellore, India

- Cum. GPA: 8.66 / 10.0

Central Hindu Boys School

2012

Schooling

Varanasi, India

SKILLS

Programming Languages : Python, Java, C#, Shell, JavaScript, TypeScript, Angular

Operating Systems : Linux, macOS, Windows, Unix

Messaging & Streaming : Kafka, Kafka Connect, Kafka Streams

Cloud & Containers : AWS, GCP, Azure, PCF, Docker, Kubernetes

Infrastructure as Code : Terraform, Bicep, ARM JSON

Frameworks : FastAPI, Spring Boot, Flask, Angular, AWS Lambda, API Gateway

AI : Generative AI, Agentic AI

Databases : Oracle, PostgreSQL

CERTIFICATIONS

HashiCorp Certified Terraform Associate (Dec 2022)

Certified Kubernetes Application Developer (CKAD) (Nov 2022)

AWS Certified Cloud Practitioner (Aug 2022)

AWARDS

APAC CEO Award (Aug 2023)

Reward of Excellence (Jul 2020)

Winner, SEP Hackathon (Jul 2018)
